

PROFESSIONAL SUMMARY

Computer Science undergraduate (B.Tech, 2027) with a strong foundation in Data Structures, Algorithms, and Software Development. Skilled in Python, SQL, and web technologies (HTML, CSS), with hands-on experience building real-world projects in machine learning and full-stack development. Seeking on-campus placement opportunities to apply problem-solving skills and develop scalable software solutions.

WORK EXPERIENCE

Skill Craft Technology

ML Intern

June 2025 – July 2025

- Built a Linear Regression model to predict house prices using features like square footage, bathrooms, and bedrooms.
- Applied K-Means clustering to segment retail store customers based on their purchasing patterns.
- Implemented an SVM classifier to distinguish between images of cats and dogs.
- Developed a Hand Gesture Recognition model to classify gestures from images/videos for intuitive human-computer interaction.

SKILLS

- |                        |                      |                     |                   |
|------------------------|----------------------|---------------------|-------------------|
| - Advanced Python      | - Strategic Planning | - Graphic Designing | - SQL & Database  |
| - HTML                 | - DSA                | - DBMS              | - CSS             |
| - Prediction Modelling | - Leadership         | - Java Basic        | - C++ Programming |

PROJECTS

Self-Care Synergy

Jan 2025

- Created a self-care management platform offering daily schedules, health insights, and caregiver assistance.
- Designed features to analyze user habits and provide personalized self-care recommendations.
- Built a user-friendly web interface with SQL-backed authentication for secure access and data management.

House Price Prediction Model

May 2025

- Built a GUI-based House Price Prediction tool using Python, Tkinter, and Linear Regression.
- Implemented real-time predictions with automated data storage and updates in CSV.
- Integrated data visualization with Matplotlib to analyze housing price trends.

VisionDX – Retinal Disease Detection System

Aug 2025

- Developed a deep learning-based system using CNNs and TensorFlow to detect and classify multiple retinal diseases from fundus images.
- Built an end-to-end pipeline including image preprocessing, model training, and performance evaluation to ensure accurate predictions.
- Designed the system for scalability and real-world healthcare use, enabling faster and more reliable automated diagnosis.

EdgeVisionNet: Live Energy Intelligence Edge AI Platform

Jan 2026

- Developed a full-stack Edge AI system with real-time device telemetry to monitor CPU, memory, battery, and energy usage during AI inference.
- Built a custom lightweight model (EdgeVisionNet) using MobileNetV2 with attention mechanism for efficient on-device image classification.
- Implemented API-based inference with TensorFlow Lite optimization for edge deployment and low-latency performance.
- Designed an interactive web dashboard to visualize live analytics, model comparison, and energy savings vs cloud AI systems.
- Integrated performance benchmarking including accuracy, latency, and energy efficiency across multiple lightweight models.

PROFESSIONAL CERTIFICATIONS

Machine Learning A-Z

Jul 2025

Python Pro

May 2025

AI & ML Bootcamp

May 2025

EDUCATION

B. Tech, SRMIST

2023 - 2027

XII (Science), Airforce School Ghaziabad

2022 - 2023

X, Airforce School Ghaziabad

2020 - 2021

#### **AWARDS & ACTIVITIES**

- Awarded **NCC "A" Certificate**, showcasing commitment to physical fitness, discipline, and community service in March 2021.
  - Head Boy – Led the student council, coordinated events, mediated between students and faculty, and represented the school in interschool functions for session 2022-23.
-
